INTRODUCCIÓN

Aplicación desarrollada con las diferentes tecnologías las cuales son:

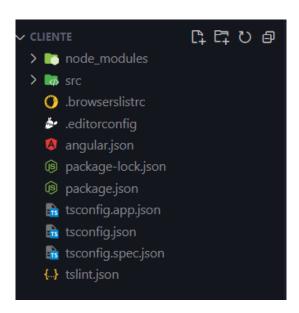

Esta aplicación trata de aplicar todos los conocimientos recibidos en el curso de desarrollo web, así mismo hicimos de un pequeño CRUD en el cual ingresamos datos, modificamos y eliminamos, me base en estas tecnologías ya que me parecieron atractivas ya que no había trabajado con ellas a continuación veremos diferentes componentes que conforman este proyecto.

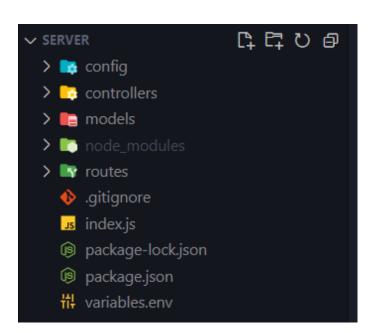

ENTORNO DE DESARROLLO

Utilice visual studio code, así mismo mi proyecto trabajamos en dos carpetas las cuales son el fronted / backend como podemos observar, cada una de ellas tiene una estructura para tener un mejor orden de trabajo

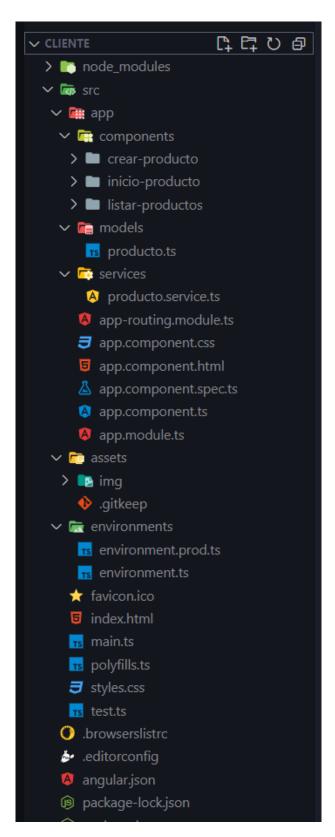

FRONTED

Captura de pantalla del código asi como la vista final.

```
producto.ts X
src > app > models > rs producto.ts
       export class Producto {
         _id?: number;
         codigo: number;
         nombre: string;
         apellido: string;
         nacionalidad: string;
         genero: string;
         fecha_nacimiento: Date;
         lugar_nacimiento: string;
         vecindad: string;
         pueblo: string;
         com_lugui: string;
         estado_civil: string;
         fecha_vencimiento: Date
         constructor(codigo:number, nombre: string, apellido: string, nacionalidad: string,
             genero: string,
             fecha nacimiento: Date,
             lugar nacimiento: string,
             vecindad: string,
             pueblo: string,
             com_lugui: string,
             estado_civil: string,
             fecha_vencimiento: Date ){
                 this.codigo = codigo;
                  this.nombre = nombre;
                  this.apellido = apellido;
                  this.nacionalidad = nacionalidad;
                  this.genero = genero;
